AAT APPLIED ASSURANCE TECHNOLOGIES LLC

CAPABILITY STATEMENT • OCTOBER 2026

Procurement Assurance Companion (PAC)

Evidence-grounded regulatory assurance for federal acquisition teams

PAC is an AI-assisted procurement quality-assurance platform that helps contracting officers and specialists assess acquisition packages against applicable regulatory requirements. It combines deterministic clause logic, document analysis, and traceable findings to identify issues early while preserving the authority of government acquisition professionals.

FAR / agency supplements | Deterministic + AI-assisted | Source-backed findings | Human-in-the-loop

CORE PAC CAPABILITIES

Prescription-based clause applicability

Evaluates FAR and configured agency-supplement clause conditions against supported acquisition characteristics and documented evidence.

Required / missing / unresolved clauses

Compares applicable requirements with documented clause content; flags missing items where evidence permits and preserves uncertainty.

Regulatory traceability

Associates findings with relevant regulatory references, rule conditions, and available supporting evidence.

Procurement package review

Analyzes acquisition documents and supporting materials for gaps, conflicting terms, incomplete references, and potential policy issues.

Contract structure and consistency

Applies structured checks involving CLINs, pricing attributes, contract types, document relationships, and other acquisition information.

Decision support and review focus

Presents qualified findings, explains open questions, and helps professionals prioritize meaningful follow-up.

HOW PAC SUPPORTS A REVIEW

01 / INGEST	02 / EVALUATE	03 / EXPLAIN	04 / DECIDE
Acquisition package and available facts	Regulatory rules and document checks	Findings with authority and context	Authorized professional reviews

WHY IT MATTERS

Earlier identification: Surface potential errors when procurement documentation can still be corrected.

Repeatable and explainable: Use defined controls and retained supporting context instead of relying solely on generative output.

Practical professional oversight: Keep discretionary determinations, approval, and award authority with authorized government officials.

DESIGNED FOR ACQUISITION WORKFLOWS

Procurement assurance that complements existing systems.

PAC delivers a focused assurance layer alongside enterprise acquisition applications. Procurement teams gain clause applicability analysis, supporting evidence, and clearly presented findings that complement established acquisition workflows.

ACQUISITION SYSTEM	PAC ASSURANCE	AUTHORIZED REVIEWER
Package, document, and supported acquisition facts	Clause applicability, evidence, and review findings	CO / specialist evaluates and resolves findings

REPRESENTATIVE USE CASES

Solicitation readiness review — Review available solicitation materials and clause or provision requirements before issuance, with supporting regulatory references.

Award and modification quality assurance — Evaluate contract-package terms and identify qualified missing-clause, scope, structural, and supporting-evidence issues.

Enterprise procurement assurance — Strengthen acquisition workflows with regulatory clause checks, evidence-supported findings, and clear information for contracting professionals.

FLEXIBLE, FEDERAL-FOCUSED APPROACH

Core assurance capabilities

Clause applicability analysis, document review, evidence-supported findings, and clear presentation of follow-up questions.

Mission-aligned configuration

Agency rulebooks, acquisition context, and review priorities can be reflected in a focused procurement-assurance approach.

Designed to complement systems

PAC complements contract-writing and acquisition platforms with consistent regulatory analysis, evidence, and reviewer-ready findings.

Security and deployment

Federal-focused design emphasizing dedicated cloud environments, controlled access, data protection, encryption, and auditable review activity.
